

JetCredit is an on board Credit Card Authorization and Fund Transfer Application for passenger purchasing of any offered services.

JetCredit is an on-board Credit Card Check Application aimed at Airlines and SeaLines wanting to verify Passenger's Credit Cards used on board Aircrafts or Ships for purchasing any type of on board service.

MAIN FEATURES

- **Credit Card Authorization**
- **Uses payflow pro**
- **Easy Configuration**
- **Convenient GUI**
- **Transaction Log**
- **Run as native application**
- **Run as web page**

Airlines and Sealines require the ability to verify their passenger's credit cards during flights or cruises to minimize their revenue losses.

The introduction of air to ground communication links on board aircrafts and ships enable a direct connection to ground based Credit Card Authentication servers and Payment processors.

JetCredit uses proven ground Credit Card authentication technology used on the Internet to provide the Airlines and Sealines with reliable and secure transaction capabilities.

JetCredit is configurable according to the Airline, Sealine and Institutional/National requirements in terms of security and privacy

All Credit Card transactions performed by the Crew Members are recorded in a transaction log. For Privacy issues Credit Cards Numbers are not stored in JetCredit. The transaction code can be used instead to retrace the purchasing data from the ground Credit Card Authentication Center and Payment Processor. JetCredit allows easy configuration and selection of Airline preferred payment processors.

Graphical User Interface

A simple plane layout interface enables the crew to easily select the Passenger by Name or by Seat Number just by clicking on the plane layout or on the passenger list.

Another easy to use form allows for simple "push button" entry of Credit Card Numbers, Expiry date and CSV Codes. Just as easy as pressing a button, JetCredit establishes a Secure Socket Layer connection with a Credit Card Authentication Center and in positive case the transaction can be performed as a one or two phases process.

A receipt can be printed and given to the passenger immediately or sent as a PDF to a passenger's designated E-Mail address immediately or when the plane lands and has available a lower cost connection.

JetCredit is available both as a Windows or Linux application or as a platform portable php based Web application running on most popular browsers.
